

Cost effective

Software Asset Management for Oracle

Lime Software puts your business back in control of your Oracle Licensing. Helping you understand your compliance position, manage your risks and maintain accurate reporting of actual usage of all Oracle Technology and e-Business Suite products. **Lime Software** delivers cost-effective solutions for Oracle licensing to Small Medium Sized Businesses, Corporations and Public Sector Organisations.

Zero Infrastructure Implementation

Lime does not require any infrastructure to deploy, no middleware or databases are required. Inventory turn around in days not months.

Zero Server Footprint Technology

Lime uses standard JDBC and PL/SQL to connect and collect.

Zero-Agent installation

Just install on your desk-top PC and it starts to collect all the data required to ensure your Oracle Products are compliant. No Network overhead, just fast effective auditing.

Effective Named User Plus License Management

Customers who have Enterprise User License Agreements (EULA) with Oracle struggle to accurately report on actual usage of their end user populations; the benefits of the EULA are not always achieved. **Lime License Manager** actively manages this problem by reporting detailed usage of the Oracle Database. User history (Metering) is accurately captured and stored for complete analysis, giving customers an exact view of whether they are over-spending on their Oracle licensing.

Compliance, Control and Cost Reduction

Lime's products are designed to meet the stringent standards demanded by our Enterprise Customers. Our aim is to get customers compliant, maintain a complaint position and understand where change impacts their bottom-line. With Scalable, Agent-less technologies Lime delivers Oracle License compliance at a fraction of the cost of any competitive solutions.

Lime:

- Low cost – High reward
- Zero infrastructure implementation
- Security, scalability and availability
